**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-14 and 16-21, drawn to a method for determining stress.

Group II, claim 22, drawn to a device comprising a chemiluminometer.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The method of Group I is drawn to the inventive concept of measuring superoxide anion production in individuals exposed to stress. Group II is drawn to a device for measuring superoxide production by means of a chemiluminometer, which is a device that was known to one of ordinary skill in the art at the time the claimed invention was made (see, for example, Pfefferkorn US 5,492,816, col. 4, lines 40-51). According to Pfefferkorn, production of superoxide anion can be detected using luminol or isoluminol and a spectrophotometer or any similar detection instrument (i.e., a chemiluminometer). Therefore, detection of superoxide by the device of Group II does not relate to the single general inventive

concept of Group I, because the device of Group II is not considered a special technical feature.

Applicant is advised that the response to this requirement, to be complete, must include an election of the invention to be examined even though the requirement may be traversed.
